ORCID: 0009-0004-4899-5892
Nationality: Vietnamese

Personal Profile

A researcher passionate about Computer Vision in Biotechnology/Biometric. I build models for learning complex interactions and feature extraction from bio images. With deep knowledge of many AI technologies like NLP, RAG, Agentic AI, and Evolutionary Algorithms in addition to Computer Vision.

Education

2024 – 2028: Computer Science

Hanoi University of Science and Technology, Hanoi

GPA: 3.37/4.00

Relevant Coursework: Statistics, Calculus

Key Research Interests: 2D/3D Computer Vision, Biometric & Biotechnonology, Software Optimization, Malware Detection.

Experience

Nov 2025 – Present: Research Assistant

BKAI Lab - *Hanoi University of Science and Technology, Ha Noi*

- Spearheading lab initiatives in biometric and biotechnological computer vision to enhance automated identification accuracy.
- Integrating evolutionary computing techniques to optimize model performance in complex biological imaging tasks.
- Providing technical leadership and assistance for high-impact research projects within the BKAI lab include both Computer Vision and Optimization field.

Oct 2024 – Sept 2025: Product R&D Internship

R&D Office - *Vietnam Posts and Telecommunications Group (VNPT), Ha Noi*

- Collaborated with a cross-functional team to build and deploy internal and external AI chatbots for flagship enterprise products.
- Optimized chatbot logic and response generation to improve user engagement and support efficiency across company platforms.
- Assisted in the research and development of conversational AI models tailored to telecommunications service requirements.

Sept 2024 – Oct 2025: Research Assistant

BAILab - *National Economic University, Ha Noi*

- Conducted independent research under faculty supervision focusing on Natural Language Processing (NLP) and AI Agent architectures.
- Designed and implemented Retrieval-Augmented Generation (RAG) systems specifically applied to the medical informatics field.
- Evaluated the efficacy of various large language models in processing and retrieving sensitive medical data for clinical decision support.

Academic Publications

Biology-Guided Local-Global Residual Propagation for Spatial Gene Expression Prediction from Histology Under review WACV2027 [Q1].

Vu Van An, Nguyen Duy Long, Ho Viet Duc Luong, Nguyen P. Binh.

Frequency-Gated Orthogonal Representation Learning for Unified Fingerprint Recognition and Presentation Attack Detection Under review IEEE [Q2].

Binh An Nguyen, **Van An Vu**, Khanh Tung Hoang, Luong Uy Nguyen.

Accelerating Large-Scale Fingerprint Identification using Minutiae-Free Dynamic Graph Transformers. Under review IEEE [Q1].

Binh An Nguyen, Luong Uy Nguyen, **Van An Vu**, Ngoc Nam Khuc and Tuan Linh Dang.

From Prompts to Pareto Fronts: Using Code LMs as Semantic Genetic Operators for Compiler Bug Discovery. Accepted Full-paper [Best Paper Award annotate, Q1] GECCO2026.

Lang Hong Nguyet Anh, Ho Viet Duc Luong, **Vu Van An**.

Projects

BTS Tower Digital Twin Reconstruction | Third Place - Viettel AI Race 2026

Hibiscus Company

- **BTS tower reconstruction:** Build a pipeline for accurately reconstruct a 3D digital twin from large view drone's image of BTS tower.
- **3D Gaussian Splatting:** Developed a novel 3DGS methodology to leverage baseline performance from 72 score to 77 score.

BAIStudio | Second Place - SCIC_Q1 2026

Hibiscus Company

- **Visual Pipeline Engine:** Engineered an interactive drag-and-drop AI workflow builder (Laboratory), architecting over 40 customizable node types to let users visually construct automated AI applications.
- **Interactive Learning Ecosystem:** Developed a comprehensive front-end educational platform featuring structured learning roadmaps, a community prompt library, and responsive UI/UX.

Skills

Python, C/C++, Linux (Ubuntu), PyTorch, FAISS, LangChain

Languages: English (Intermediate), Vietnamese (Native)
